### Detailed

### System diagram

#### With N wire connection (Single phase 120/230V)

#### No N wire connection (Single phase 120V)

**Note:** You can purchase a professionally customized AC bus with a T-type connector. Use this AC bus as the AC bus for each branch. Connect it hand in hand to form a modular micro-inverter branch wiring system.

**When the inverter is not started/shutdown and has been connected to the grid, the status of the LED indicators is as follows**

- 1) When the inverter is not working ----- Red light is always on
- 2) When the inverter is in working state ----- Blue light flashes (MPPT is locked to a long light state)

**When the inverter is not started/shutdown and is not connected to the grid, the LED indicator status is as follows**

- 1) When the inverter is not working ----- Red light flashes
- 2) When the inverter is in working state ----- Blue light flashes (MPPT is locked in a long light state), and the red light flashes once every three seconds

## Note

Please strictly observe the following installation conditions

- Connect the communication antenna on the inverter;
- Install the inverter in a place where the Wifi signal is well covered;
- The connected Wi-Fi network needs to be in 2.4G communication mode;
- If the WiFi signal cannot effectively cover the inverter, an additional WiFi signal booster can be installed;
- Turn on the Bluetooth of the mobile phone;

## Features

Smart APP can realize real-time data transmission with the cooperation of Alibaba Cloud IoT. Through graphs and graphic displays in time, users can understand the operation of the power station. The user can monitor the operation and adjust the output power function of the system.
